

INSTALLATION GUIDE

3rd Brake Light Tire Mount

First, we'll need to remove the stock 3rd brake light plastic component from the rear door and unscrew the front side as shown in Fig 1A

FIG 1A

FIG 1B

Next, you'll need to remove the 3rd brake light from the housing (Fig 1B)

FIG 1C

Grab the included 3rd brake light mount and attach your 3rd brake light from underneath (Fig 1C) with screws you removed from the stock housing.

This is also a good opportunity to screw on the Expedition One face plate provided if its not already on the mount.

FIG 2A

FIG 2B

FIG 2C

Next, hand tighten the provided open-ended lug nuts to the top two locations (see Fig 2B)

The included spacers (shown in Fig 2C) are optional depending on your wheel offset.

Place the large provided screws through the mount opening on the back side and screw into the open-ended lug nuts attached in previous step.

FIG 3A

FIG 3B

FIG 3C

At this point, you'll want to feed your lighting wire through the wheel and connect it from underneath.

Your all done!

Make sure to check your 3rd brake light activates with your brakes pressed and tidy up your wiring as needed.
